GELFLOOR rubber tiles

Comfort, stability, durability, functionality

The GELFLOOR mats are the result of many years of experience that exceeds your expectations of comfort, durability as well as aesthetics. This premium flooring very well absorbs the impacts, falls during exercise, relieves the effects of barbells and exercise tools falling, protecting the base layer (concrete, anhydrite). Thanks to the elastic structure of the rubber floor material composition, the exercising is more comfortable and safer. A well-made, solid and yet flexible surface will extend the duration of the workout.

The GELFLOOR floorings can be used as the walking areas for the fitness centres and gyms, or as silencing tiles under the training machines, dumbbells and weight lifting platforms.

The primary colour of GELFLOOR is black, which comes from the SBR rubber. It is possible to add a colour EPDM granulates to the SBR rubber (according to the GELPO EPDM colour chart).

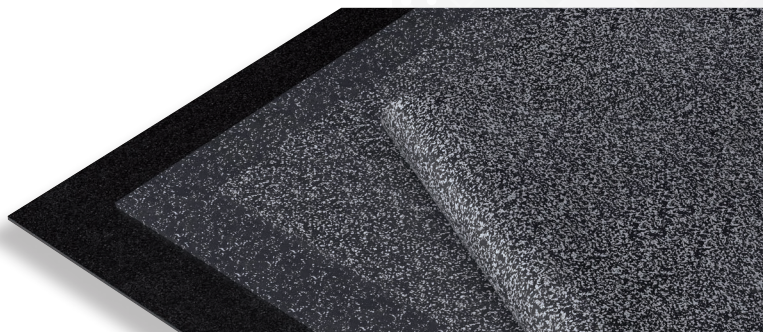

GELFLOOR FIT

these are rectangular tiles which can be glued to the existing base on the whole surface or just in the joints.

Basic information

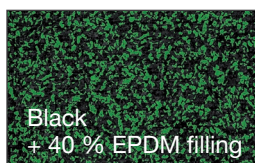

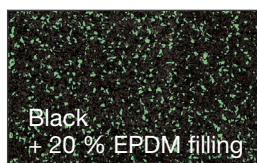

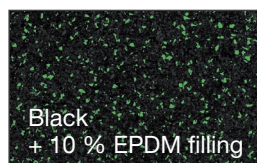

Material: SBR rubber and EPDM
